Problem Statement

Organizations using Microsoft Azure may have multiple departments and subscriptions needing centralized management.

KEY CHALLENGES

- Managing multiple subscriptions is complex
- Governance policies may lack consistency
- Different departments require different policies
- Hierarchy changes post-assignment disrupt governance
- Policy inheritance can cause unexpected effective results

PROJECT GOAL

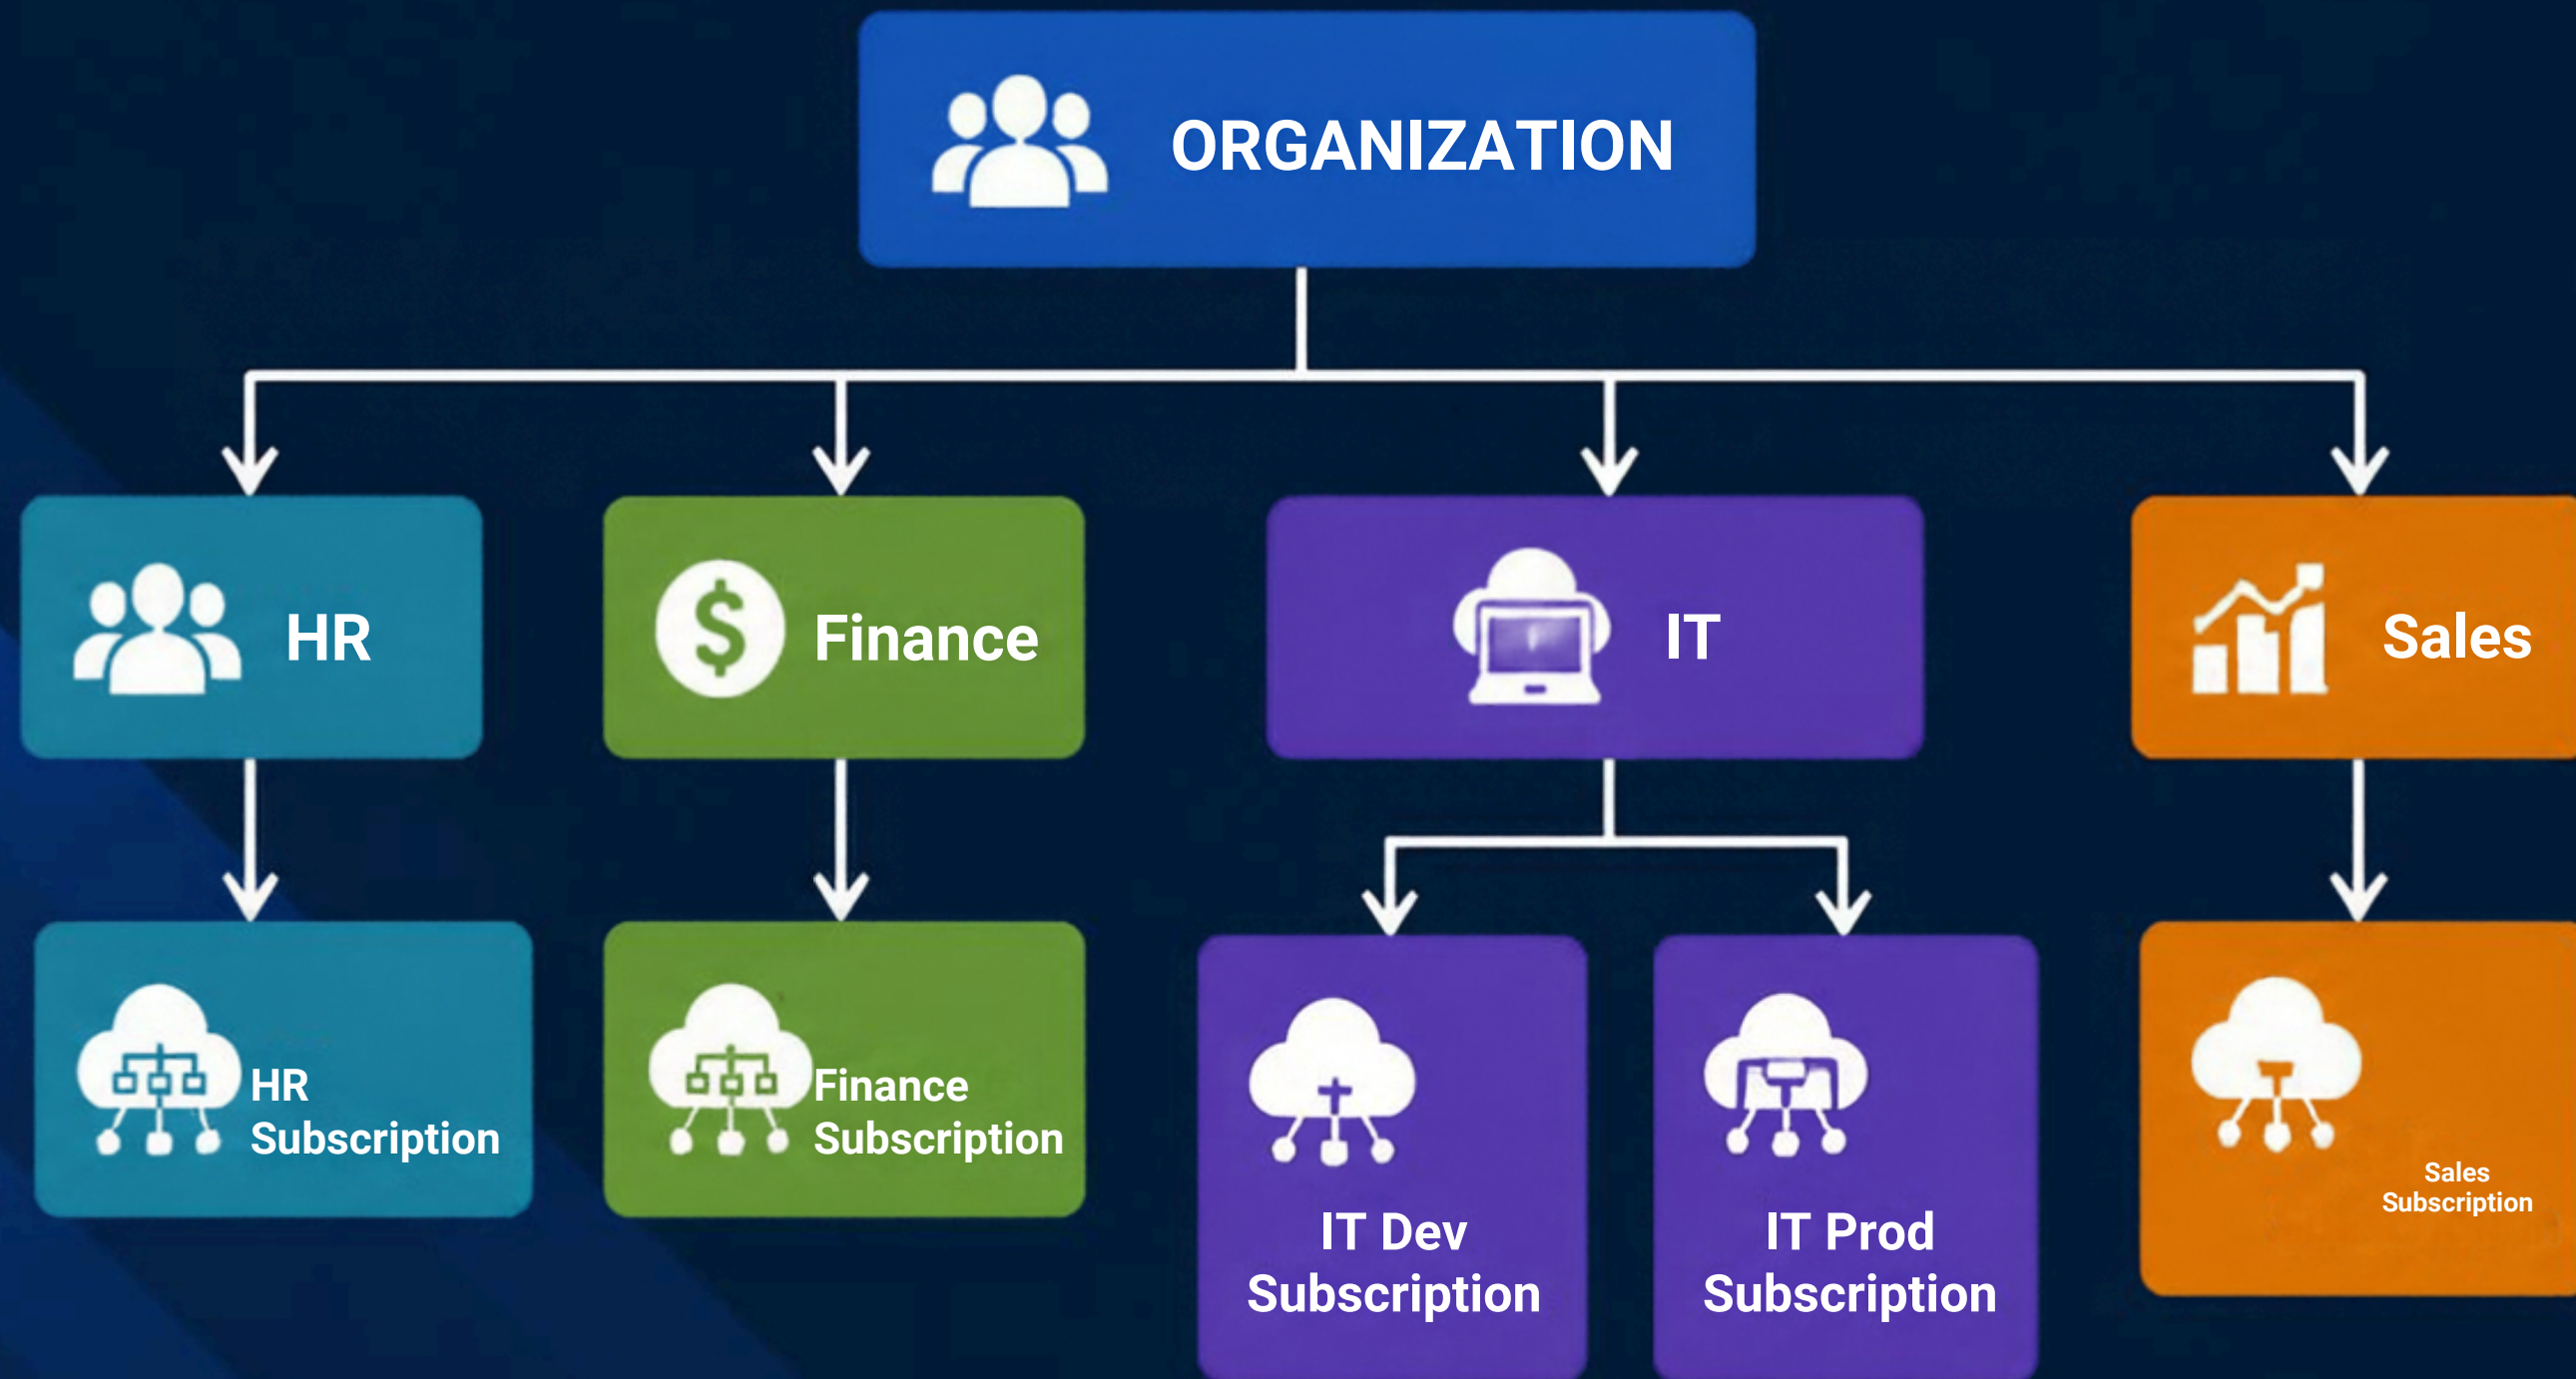

Design an Azure Management Group hierarchy for four departments and demonstrate correct policy inheritance.

Project Methodology

Proposed Azure Management Group Hierarchy

Centralized
management

Clear department
separation

Organized
subscriptions

Scalable
hierarchy

Governance and Policy Design

ORGANIZATION-LEVEL POLICIES

Restrict allowed Azure regions

Require resource tags

Enforce common governance standards

DEPARTMENT-LEVEL POLICIES

Additional requirements for specific departments

Example: IT-specific tagging and config requirements

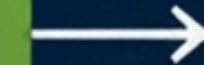

Organization-Level Policies

Common Governance

Department Policies

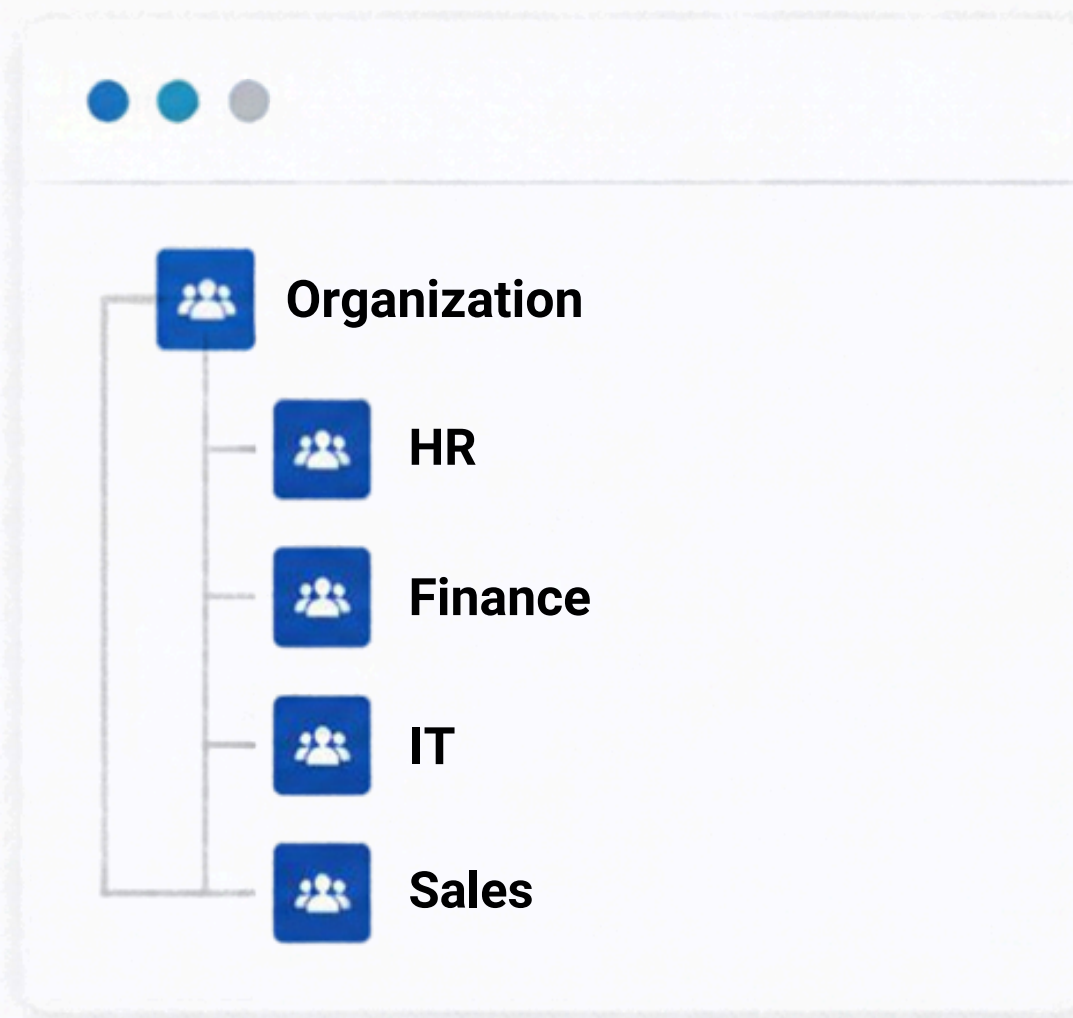

Specific Requirements

Common policies can be applied **centrally**, while **departments** can have additional requirements.

Prototype / Implementation Approach

Management Groups Prototype

Prototype / Proposed Interface

Management Group Hierarchy

Policy Assignment Prototype

Prototype / Proposed Interface

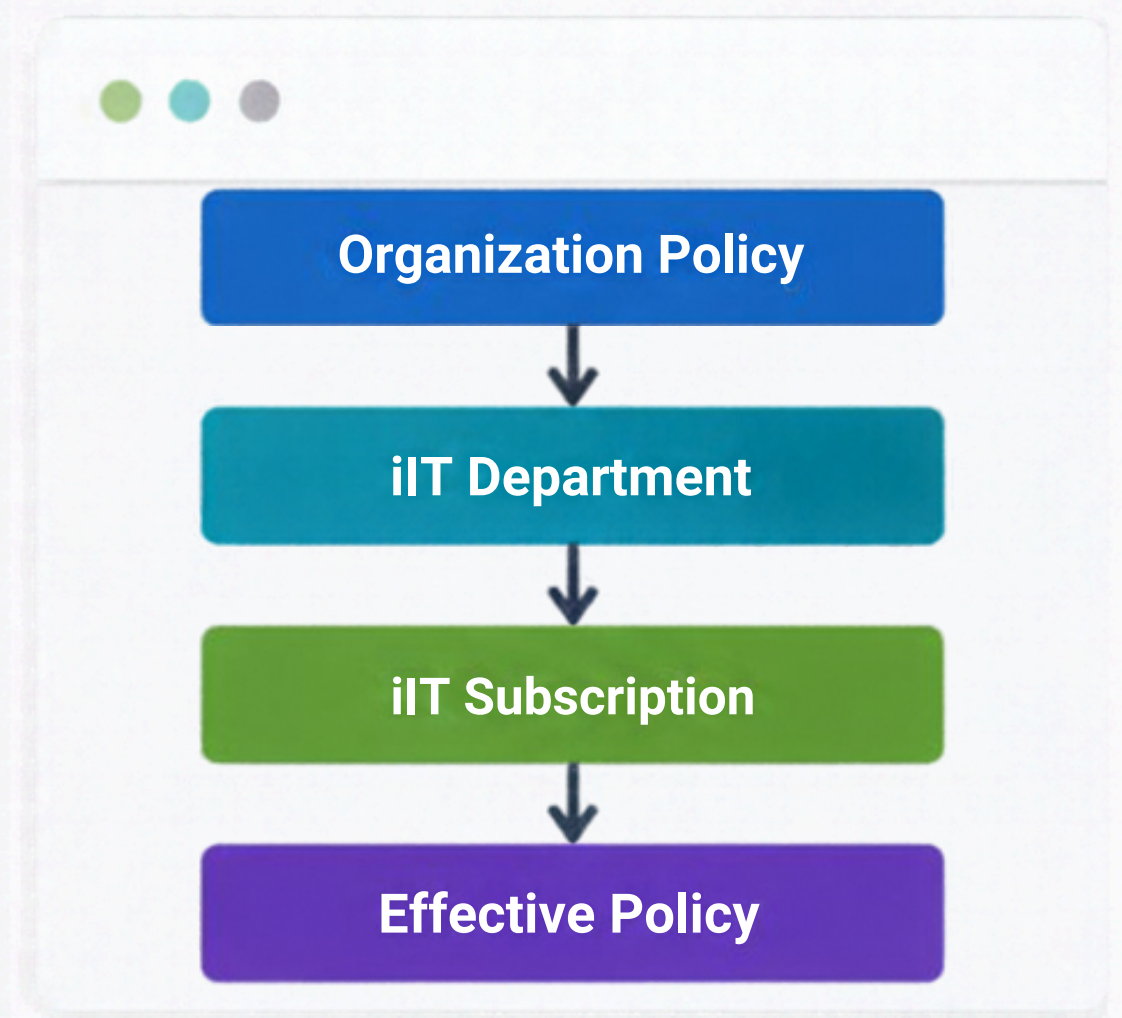

A form for assigning policies. It contains three rows, each with a label and a dropdown menu. The first row is 'Scope' with 'Organization' selected. The second row is 'Policy' with 'Allowed Locations' selected. The third row is 'Status' with 'Assigned' selected.

Scope:	Organization
Policy:	Allowed Locations
Status:	Assigned

Organization-Level Policy Assignment

Policy Inheritance Prototype

Prototype / Proposed Interface

Policy Inheritance Flow

Testing, Bottlenecks and Expected Outcome

TESTING

Test 1: Hierarchy Change

Example: HR → HR

Subscription Then: IT → HR

Subscription Test governance policies after change.

Test 2: Policy Inheritance

Organization Policy + IT-Specific Policy → Effective IT Governance
Test if inherited and department policies reflect correctly.

BOTTLENECKS

Hierarchy changes after assignments can be disruptive.

Parent and department-specific policies can produce unexpected effective results.

EXPECTED OUTCOME

Structured four-department Azure hierarchy

Centralized governance

Correct policy inheritance

Better subscription management

Scalable structure for future departments

THANK YOU
